

POST-OPERATIVE INSTRUCTIONS

IMPLANT-SUPPORTED CROWNS

These instructions are provided to ensure proper healing, longevity, and function of your implant-supported crown.

First Days

Avoid chewing hard or sticky foods on the implant-supported crown. Mild sensitivity or pressure sensation may occur and is considered normal.

Oral Hygiene

Brush gently twice daily and clean carefully around the implant using implant-specific floss or interdental brushes.

Smoking, Alcohol & Substance Use

Smoking, alcohol consumption, and any drug or substance use negatively affect peri-implant tissues and significantly increase the risk of complications.

Night Guard

If a night guard has been prescribed due to bruxism or clenching, it must be worn consistently. Failure to use a prescribed night guard voids warranty coverage.

Follow-Up & Maintenance

Attend all scheduled follow-up visits and professional cleanings as advised.

When to Contact the Clinic

Contact the clinic immediately if you experience pain, swelling, mobility, fracture, or any unusual sensation around the implant-supported crown.

Patient Acknowledgement

I confirm that I have read, understood, and agree to follow the post-operative instructions provided above. I understand that failure to follow these instructions may result in complications and void warranty coverage.
