

POST-OPERATIVE INSTRUCTIONS

ALL-ON-X TEMPORARY PROSTHESIS

I understand that the temporary All-on-X prosthesis is provided primarily for aesthetic purposes and basic daily function during the healing period.

Avoid hard, sticky, crunchy, or chewy foods. A soft diet is mandatory until the final prosthesis is placed.

Do not bite with excessive force or use the temporary teeth to cut hard foods.

I understand that the temporary prosthesis has no guarantee and is not intended for long-term use.

Maintain excellent oral hygiene around the prosthesis and implants.

Use a soft toothbrush and gently clean all accessible surfaces.

The use of an **oral irrigator (water flosser / oral shower)** is strongly recommended to clean underneath the prosthesis and around the cleanable areas.

Airflow, saliva passage, and minor speech changes (including lisp) are normal during the adaptation period.

Avoid smoking and alcohol consumption during healing, particularly until your second clinical visit.

Contact the clinic immediately if severe pain, swelling, fracture, or loosening of the prosthesis occurs.

Failure to follow these instructions may compromise healing and may result in complications or additional treatment costs.

Patient Acknowledgement

I confirm that I have read and understood these post-operative instructions and agree to follow them.
