

POST-OPERATIVE INSTRUCTIONS

DENTAL IMPLANTS

Do not rinse, spit forcefully, or touch the surgical area for the first 24 hours.

Avoid smoking and alcohol consumption during the healing period, as these may negatively affect blood supply, wound healing, and osseointegration, particularly until your second clinical visit.

Take prescribed medications exactly as instructed.

Apply cold compresses intermittently for the first 24 hours to reduce swelling.

Soft diet is recommended; avoid hard, crunchy, or hot foods.

Maintain oral hygiene carefully, avoiding direct brushing of the surgical site for the first few days.

Minor swelling, bruising, bleeding, or discomfort is normal during early healing.

Contact the clinic immediately if severe pain, excessive bleeding, fever, implant mobility, or signs of infection occur.

Failure to follow these instructions may compromise healing, osseointegration, and implant success, and may void any applicable treatment guarantees.

Patient Acknowledgement

I confirm that I have read and understood these post-operative instructions and agree to follow them.
