

ORAL HYGIENE & PERIODONTAL MAINTENANCE ACKNOWLEDGEMENT FORM

(Post-Treatment Responsibility Declaration)

Patient Name & Surname:

Date:

Passport / ID:

INITIAL CLINICAL CONDITION

The patient attended the clinic with pre-existing periodontal disease and heavy plaque/calculus accumulation.

Periodontal therapy was performed to stabilise the tissues before prosthetic treatment.

The patient was informed that long-term stability depends on strict personal oral hygiene and regular professional maintenance.

TREATMENT PROVIDED

During the visit, the following procedures were performed:

- Scaling (detartrage – tartar removal)
- Polishing
- Subgingival curettage / periodontal debridement (deep gum cleaning)
- Crown / prosthetic restorations

These procedures were carried out to eliminate inflammation and prepare the oral tissues for restorative treatment.

Periodontal disease is a chronic biological condition and may recur if maintenance is not strictly followed.

PATIENT RESPONSIBILITIES

I understand and accept that after my treatment I MUST:

1. Brush my teeth at least twice daily using correct technique (from gum towards tooth)
2. Use dental floss and/or interdental brushes every day
3. Maintain continuous oral hygiene care
4. Attend professional dental cleaning (scaling + polishing including tartar removal):
 - First maintenance within 5–6 months
 - Afterwards every 6 months for life (or earlier if advised)
5. Follow all oral hygiene instructions given by the clinic

BIOLOGICAL LIMITATIONS

I understand that dental restorations are placed on biological tissues (gum & bone).

If oral hygiene is insufficient, the following may occur:

- Gum recession around crowns
- Tooth sensitivity
- Bleeding gums
- Inflammation or infection
- Bone loss
- Exposure of crown margins
- Aesthetic changes
- Need for additional dental treatments

These are biological and hygiene-related conditions, not technical or material defects.

LIMITATION OF CLINICAL RESPONSIBILITY

I understand and accept that:

If adequate oral hygiene is not maintained or regular professional cleanings are not performed, any resulting conditions will be considered maintenance-related biological complications.

In such cases, corrective treatments are not included within treatment responsibility coverage.

This includes (but is not limited to):

- Gum recession
- Sensitivity
- Inflammation
- Bone loss
- Marginal exposure
- Hygiene-related complications

DECLARATION

I confirm that:

- I received verbal and written explanation
- I understood the maintenance requirements
- I accept full responsibility for my oral hygiene after treatment
- I understand long-term success depends on my personal care and regular professional cleaning

I have read and understood this document fully and voluntarily sign.
